Preface

Chapter 1: An Introduction to Human Spaceflight

1.1 Humans in Space
1.2 The Lifecycle of Human Space Missions
1.3 The Space Mission Concept and Architecture
1.4 The Challenges

Chapter 2: Designing Human Space Missions

2.1 Define Mission Objectives
2.2 Define Mission Requirements and Constraints
2.3 Develop Alternative Mission Concepts and Architectures
2.4 Identify System Drivers and Critical Requirements
2.5 Baseline a Mission Concept and Architecture

Chapter 3: The Space Environment— Hazards and Effects

3.1 Operating in a Vacuum
3.2 Effects of the Nonionized Atmosphere
3.3 The Plasma Environment—Spacecraft Charging
3.4 Section 3.4 Effects of Radiation
3.5 Micrometeoroids and Orbital Debris (MMOD)
3.6 Interplanetary Space
3.7 Section 3.7 Design Example—Lunar Base

Chapter 4: Surface Environments

4.1 The Moon
4.2 Mars

Chapter 5: Physiology of Spaceflight

5.1 Setting Environmental Parameters
5.2 Metabolic Parameters and Related Inputs and Outputs
5.3 Other Physiological Factors
5.4 Lunar Base Example

Chapter 6: Human Factors of Crewed Spaceflight

6.1 Defining the Role of Human Factors in Space Missions
6.2 Analyzing Tasks, Allocating Functions, and Assigning Workloads
6.3 Human Abilities and Limits
6.4 Analyzing Space and Surface Elements
6.5 Working with a Case Study—the Lunar Base

TABLE OF CONTENTS

Chapter 7: Psychology of Spaceflight

- 7.1 Basic Concepts
- 7.2 Designing the Psychological Aspect
- 7.3 Levying the Design
- 7.4 Conclusion

Chapter 8: Safety of Crewed Spaceflight

- 8.1 Safety Design
- 8.2 Designing for Safety
- 8.3 Safety Analysis
- 8.4 Risk Informed Design—Lunar Base Example

Chapter 9: Orbit Selection and Astrodynamics

- 9.1 Mission Design
- 9.2 Keplerian Orbits
- 9.3 Options for Trajectories and Orbits
- 9.4 Lunar Base Example

Chapter 10: Entry, Descent, Landing, and Ascent

- 10.1 Doing Mission Trades and Developing Requirements
- 10.2 Atmospheric Entry
- 10.3 Descent and Landing
- 10.4 Ascent
- 10.5 Lunar Base Example

Chapter 11: Designing and Sizing Space Elements

- 11.1 Designing Space Elements
- 11.2 Review the Mission Statement and Mission Objectives
- 11.3 A Preliminary List of Requirements and Constraints
- 11.4 Create Preliminary Concepts for a Space Station
- 11.5 Select Orbit and Approach to Orbit Control
- 11.6 Select Flight Mode
- 11.7 Make Critical Choices for Subsystems
- 11.8 Develop Alternative Configurations
- 11.9 Assess Concepts for the Space Element
- 11.10 Select a Baseline Configuration
- 11.11 Design Example: “Minimum Growth Space Station”

Chapter 12: Transfer, Entry, Landing, and Ascent Vehicles

- 12.1 Define Requirements and Constraints
- 12.2 Generate Vehicle Concepts
- 12.3 Select Options for Further Development
- 12.4 Develop Conceptual Designs for Selected Options
- 12.5 Evaluate Conceptual Designs and Select a Baseline
- 12.6 Vehicle Design for an Example Lunar Mission

TABLE OF CONTENTS

Chapter 13: Designing, Sizing, and Integrating a Surface Base

- 13.1 Determining the Mission Objectives
- 13.2 Developing the Surface Base
- 13.3 Selecting a Site and Laying Out a Base
- 13.4 Sizing and Integrating Base Zones and Elements
- 13.5 Assessing Cost and Complexity
- 13.6 Documenting and Iterating
- 13.7 Case Study: Surface Base at the Moon's South Pole

Chapter 14: Planetary Surface Vehicles

- 14.1 Mobility System Concepts and Rationale
- 14.2 Designing Mobility Systems
- 14.3 Example of a Rover Design for the Lunar Base

Chapter 15: In-situ Resources

- 15.1 Resources on Mars
- 15.2 Lunar Resources

Chapter 16: Thermal Control

- 16.1 Developing a Conceptual Design for a Thermal Control System
- 16.2 Fundamentals of Thermal Control
- 16.3 Hardware for Thermal Control
- 16.4 Thermal Environments
- 16.5 Tools for Thermal Analysis
- 16.6 Thermal Protection System
- 16.7 Passive Thermal Control
- 16.8 Active Thermal Control
- 16.9 Case Study—Mission to the Lunar South Pole

Chapter 17: Environmental Control and Life Support Systems (ECLSS)

- 17.1 Requirements for the Life Support System
- 17.2 Section 17.2 Technology Options
- 17.3 Section 17.3 Developing a System Concept
- 17.4 Example of a Mission Design

Chapter 18: Crew Accommodations

- 18.1 Designing Crew Accommodations for Space Missions
- 18.2 Mission Requirements and the Design Process
- 18.3 A Resource Model for Crew Accommodations
- 18.4 Crew Accommodations Subsystems
- 18.5 Section 18.5 Tailoring the Model for the Shuttle, ISS, Moon, and Mars

TABLE OF CONTENTS

Chapter 19: Guidance, Navigation, and Control

A Parable of Space Systems Engineering in Seven Parts

- 19.1 Overview of the GN&C Subsystem
- 19.2 Space Navigation
- 19.3 Guidance: The Link Between Navigation and Control
- 19.4 The Attitude Determination and Control Subsystem (ADCS): The Inner Loop
- 19.5 Designing the GN&C Subsystem
- 19.6 Example: The International Space Station

Chapter 20: Designing Power Systems v

- 20.1 Overview of Power Systems
- 20.2 Section 20.2 Primary Power
- 20.3 Energy Storage
- 20.4 Power Management and Distribution (PMAD)
- 20.5 Design Example

Chapter 21: Structures

- 21.1 Requirements for Space Structures
- 21.2 Establishing a Verification Plan
- 21.3 Special Considerations for Space Structures that House People
- 21.4 Design Options
- 21.5 Preliminary Layout and Sizing of Structures
- 21.6 Example: Sizing a Crew-Module Structure

Chapter 22: Extravehicular Activity(EVA) Systems Introduction

- 22.1 Requirements for EVA Systems
- 22.2 EVA Systems and Operations Concepts
- 22.3 Interfaces
- 22.4 Developing a Design
- 22.5 Case Study: Providing EVA at a Lunar Base

Chapter 23: Space Robotics

- 23.1 Basic Concepts of Robotics
- 23.2 Humans vs. Robots
- 23.3 Analyzing Functional and Operational Requirements
- 23.4 Planning and Controlling Space Robots
- 23.5 Key Design Issues for a Robotic System
- 23.6 Case Study: Robotic Rover for a Lunar Outpost

TABLE OF CONTENTS

Chapter 24: Propulsion Systems

- 24.1 Preliminary Design (Steps 1 and 2)
- 24.2 Selecting Potential Technologies (Step 3, Part 1)
- 24.3 Sizing the Vehicle (Step 3, Part 2)
- 24.4 Sizing the Thrust-generation System (Step 4)
- 24.5 Sizing the Propellant-handling System (Step 5)
- 24.6 Summarizing the Design Example

Chapter 25: Selecting Launch and Transfer Vehicles

- 25.1 Selecting a Launch or Transfer Vehicle
- 25.2 Capabilities of Launch Vehicles
- 25.3 Capabilities of Transfer Vehicles
- 25.4 Environments for Launch or Transfer Vehicles

Chapter 26: Mission Operations for Crewed Spaceflight

- 26.1 Developing a Baseline Operations Plan
- 26.2 Accomplishing the Mission Operations Functions
- 26.3 Mission Planning
- 26.4 Activity Planning and Development
- 26.5 Mission Control
- 26.6 Data Transport and Delivery
- 26.7 Navigation Planning and Analysis
- 26.8 Space Element Planning and Analysis
- 26.9 Payload Planning and Analysis
- 26.10 Payload Data Processing
- 26.11 Archiving and Maintaining the Mission Database
- 26.12 Systems Engineering, Integration, and Test
- 26.13 Computers and Communications Support
- 26.14 Developing and Maintaining Software
- 26.15 Managing Mission Operations
- 26.16 Planning Crew Activities and Training

Chapter 27: Command, Control, and Communications Architecture

- 27.1 Designing the C³ Architecture
- 27.2 Analyzing Requirements
- 27.3 Designing the Communications System
- 27.4 Design Example
- 27.5 Case Study—Lunar Mission

TABLE OF CONTENTS

Chapter 28: Space Logistics Support

- 28.1 Logistics Support in the Design Process
- 28.2 Determining the Overall Logistics Support Concept
- 28.3 Establishing Objectives, Requirements, and Constraints
- 28.4 Preliminary Logistics Support Concepts and Scenarios
- 28.5 Design Example and Early Supportability Assessment

Chapter 29: Estimating the Cost of Crewed Space Systems

- 29.1 Overview of Cost Estimating
- 29.2 Parametric Cost Estimating
- 29.3 Other Cost Issues
- 29.4 Example—Rover Design for the Lunar Base

Chapter 30: International Crewed Missions

- 30.1 The Need for International Cooperation
- 30.2 General Principles of Cooperative Missions
- 30.3 Development Processes for International Cooperation
- 30.4 Requirements and Constraints on International Crewed Missions
- 30.5 Elements of Agreements and International Management
- 30.6 Case Study

Chapter 31: Mars Design Example

- 31.1 Designing the Mars Mission
- 31.2 Transfer Vehicle—Designing the Habitation and Lander
- 31.3 Estimating Mass and Power
- 31.4 The Next Iteration

Chapter 32: Lunar Outpost Case Study

- 32.1 Define Broad Program Objectives
- 32.2 Define Program-level Requirements
- 32.3 Develop Alternate Mission Concepts and Architectures
- 32.4 Identify Critical Requirements and System Drivers
- 32.5 Select a Baseline Mission Concept and Architecture
- 32.6 Conclusions and Future Work

Appendix A - Inertias of Geometric Primitives

Appendix B - Explanation of Earth Satellite Parameters
