Preface

Chapter 1: Space Domain Awareness (SDA)

1.1 Introduction to Space Domain Awareness

1.2 Setting the Stage

1.3 Context for Space Domain Awareness

1.4 Functional Needs for Space Domain Awareness

1.5 Challenges

Chapter 2: Strategy and Tactics for Space Domain Awareness (SDA)

2.1 Space Domain Awareness Framework Model

2.2 Space Domain Awareness Information Strategy

2.3 Space Domain Awareness Synthesis and Analysis

2.4 Applied Space Domain Awareness Strategy

2.5 Summary

Chapter 3: Characterization of the Space Environment

3.1 Introduction

3.2 Dynamical Modeling

3.3 Summary

Chapter 4: Space Object Motion and Events

4.1 Causes of Actual Motion

4.2 Reference Frames and Coordinate Systems

4.3 Orbital Representations and Equations of Motion

4.4 Attitude Representations and Equations of Rotational Motion

4.5 Satellite Conjunction Assessment

4.6 Brief Summary on Causes of Perceived Motion

Chapter 5: Sources of Information (Hard and Soft Inputs)

5.1 Introduction (Noise, Incompleteness, Bias, Corruption)

5.2 Physics-based (Hard Inputs)

5.3 Human-based (Soft Inputs)

5.4 Structured and Unstructured Information

5.5 Standards, Calibration, and Metadata

5.6 The Importance of "Independent Observations" and Big Data

Chapter 6: Information Organization, Storage, and Management

6.1 Data Science and Data Management

6.2 Ontologies for Space Domain Awareness

6.3 Collecting Data from Text: Information Extraction and Natural Language Processing

6.4 From Data to Discovery

6.5 Criticality of Multi-Source Information Modeling, Engineering, and Curation for Space Domain Awareness

TABLE OF CONTENTS

Chapter 7: Uncertain Data Representation

- 7.1 Frame of Work
- 7.2 Do We Always Use Probabilities to Describe Random Systems?
- 7.3 An Example Problem: Assessing Collision Risks in the Conjunction Plane
- 7.4 The Estimation Framework for Outer Probability Measures
- 7.5 Revisiting the Collision Assessment Example

Chapter 8: Space Domain Awareness and Decision-Making for Flight Safety, Environmental Sustainability, and Security

- 8.1 Context
- 8.2 Decision Levels, Authorities, and Information Needs
- 8.3 Space Domain Awareness for Space Traffic Management
- 8.4 Space Domain Awareness for Space Command and Control
- 8.5 Summary

Chapter 9: End to End ArgusSat Example

- 9.1 Overview
- 9.2 Define Needs, Goals, and Objectives
- 9.3 Mission Characterization
- 9.4 Mission Evaluation
- 9.5 Results of Trades and Analyses
- 9.6 Detailed Subsystem Design
- 9.7 Final Spacecraft Sizing
- 9.8 Operations Planning
- 9.9 Cost Modeling
- 9.10 Multiple Sensor Satellite Design
- 9.11 Summary

Chapter 10: Space Object Identification: Fuse, Use, Analyze, and Inform

- 10.1 Introduction
- 10.2 Setting the Stage—Scenario for the Art of the Possible
- 10.3 Context
- 10.4 Process
- 10.5 Functional Needs
- 10.6 Challenges and Gaps—Sensor and Systems
- 10.7 Gap Analysis Solutions and Possibilities: Sensor and Systems
- 10.8 Summary
